Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in

the application:

**Listing of Claims:** 

1. (Original) A method of providing shared objects and node-specific

objects in a cluster file system, said method comprising:

providing to a particular shared object an attribute that indicates any

object created in said particular shared object from this point in time will be

designated as node-specific; and

when a node causes a file system operation that is node-specific to be

performed by accessing said particular shared object, performing said file system

operation in an alternate directory corresponding to said node, wherein said

alternate directory supports a node-specific object.

2. (Original) The method as recited in Claim 1 wherein said particular

shared object is a container-type shared object.

3. (Original) The method as recited in Claim 1 wherein said particular

shared object is a directory.

4. (Original) The method as recited in Claim 1 wherein said performing

said file system operation in said alternate directory includes:

ORCL-2003-139-01 Serial No. 10/810,174

Examiner: AHLUWALIA. N.

associating a pointer with said particular shared object;

using said pointer to point to a table having alternate directory information for each node:

if said alternate directory information for said node indicates that said alternate directory has not been created, creating said alternate directory for said node and updating said table with a location of said alternate directory.

- 5. (Original) The method as recited in Claim 1 wherein said file system operation that is node-specific includes creating one of a node-specific file and a node-specific directory.
- 6. (Original) The method as recited in Claim 5 wherein said file system operation that is node-specific includes modifying one of said node-specific file and said node-specific directory.
- 7. (Original) The method as recited in Claim 5 wherein said file system operation that is node-specific includes deleting one of said node-specific file and said node-specific directory.
- 8. (Original) A computer-readable medium comprising computerexecutable instructions stored therein for performing a method of providing shared objects and node-specific objects in a cluster file system, said method comprising:

ORCL-2003-139-01 Serial No. 10/810,174 providing to a particular shared object an attribute that indicates any object created in said particular shared object from this point in time will be designated as node-specific; and

when a node causes a file system operation that is node-specific to be performed by accessing said particular shared object, performing said file system operation in an alternate directory corresponding to said node, wherein said alternate directory supports a node-specific object.

- 9. (Original) The computer-readable medium as recited in Claim 8 wherein said particular shared object is a container-type shared object.
- 10. (Original) The computer-readable medium as recited in Claim 8 wherein said particular shared object is a directory.
- 11. (Original) The computer-readable medium as recited in Claim 8 wherein said performing said file system operation in said alternate directory includes:

associating a pointer with said particular shared object;

using said pointer to point to a table having alternate directory information for each node;

if said alternate directory information for said node indicates that said alternate directory has not been created, creating said alternate directory for said node and updating said table with a location of said alternate directory.

ORCL-2003-139-01 Serial No. 10/810,174

12. (Original) The computer-readable medium as recited in Claim 8 wherein said file system operation that is node-specific includes creating one of a

node-specific file and a node-specific directory.

13. (Original) The computer-readable medium as recited in Claim 12

wherein said file system operation that is node-specific includes modifying one of

said node-specific file and said node-specific directory.

14. (Original) The computer-readable medium as recited in Claim 12

wherein said file system operation that is node-specific includes deleting one of

said node-specific file and said node-specific directory.

15. (Original) A system comprising:

a cluster having a plurality of nodes;

a mass storage device coupled to said cluster; and

a cluster file system configured to automatically provide shared objects

and node-specific objects to each node without duplicating shared objects when

providing node-specific objects.

16. (Original) The system as recited in Claim 15 wherein said cluster file

system enables providing to a particular shared object an attribute that indicates

any object created in said particular shared object from this point in time will be

designated as node-specific, and wherein when one of said nodes causes a file

system operation that is node-specific to be performed by accessing said

particular shared object, said cluster file system performs said file system

operation in an alternate directory corresponding to said node, wherein said

alternate directory supports a node-specific object.

17. (Original) The system as recited in Claim 16 wherein said cluster file

system associates a pointer with said particular shared object, wherein said

cluster file system uses said pointer to point to a table having alternate directory

information for each node, and wherein if said alternate directory information for

said node indicates that said alternate directory has not been created, said

cluster file system creates said alternate directory for said node and updates said

table with a location of said alternate directory.

18. (Original) The system as recited in Claim 16 wherein said file system

operation that is node-specific includes creating one of a node-specific file and a

node-specific directory.

19. (Original) The system as recited in Claim 18 wherein said file system

operation that is node-specific includes modifying one of said node-specific file

and said node-specific directory.

20. (Original) The system as recited in Claim 18 wherein said file system

operation that is node-specific includes deleting one of said node-specific file

and said node-specific directory.

- 21. (Original) The system as recited in Claim 15 wherein said particular shared object is a container-type shared object.
- 22. (Original) The system as recited in Claim 15 wherein said particular shared object is a directory.
